PRODUCT DESIGN

T1

Attention to detail and minimalism are central to the design of the oak table. In a simple construction, its table legs pierce through the tabletop.

The design of the oak table T1 is characterised by its attention to detail and its minimalism. Its angled table legs, which connect in pairs, push through the top of the HPL-coated table top. Contrasting materials, with the oak offsetting the coloured coating, serve to emphasise the intermingling of the two elements. The strip of wood visible in the tabletop underscores the simplicity of the construction. Optionally, the tabletop can be linoleum coated, or designed to incorporate electrical sockets. If requested, the T1 can also be manufactured to specified individual dimensions. The finely worked joints highlight the table's high quality.

**ABOUT
LXSY ARCHITEKTEN**

We are LXSY ARCHITEKTEN - a planning office for inclusive architecture and interior design, founded in Berlin in 2015 by Kim Le Roux and Margit Sichrovsky. As a young architectural firm, we initiate, moderate and implement long-term, functional and sustainable projects that identify and strengthen the potential of places and social spaces. We act as an interface between clients and project partners and engage in a participatory process with all participants. With our work, we want to actively bring people together who appreciate interaction and seek to jointly develop new projects and perspectives. As part of a larger whole, we work in interdisciplinary networks and connect with actors from a variety of disciplines. Our services include our wide-ranging approach to design as well as support through all phases of planning and construction.

With our work, we pursue innovative approaches to working and living. Our interests range from office interiors, product design and architectural spaces, to our own concepts and social initiatives. With each of our projects, we try to influence social coexistence. We are convinced architecture can promote a socially, culturally, ecologically and economically sustainable future. Our approaches are unconventional and by rethinking working processes we create tailor-made solutions. We work for visionary clients to jointly develop concepts for sustainable cooperation.
